LIOS Condition Monitoring for High Voltage Cables at Industrial City Abu Dhabi

Cologne – For TRANSCO's project ICAD (Industrial City Abu Dhabi) the German DTS manufacturer LIOS Technology GmbH provided its well recognized OTS range equipment along with RTTR to monitor the temperature of the power cables supplied by cable manufacturer Silec Cable in France.

This project runs on three circuits of 6km each equipped with fibre optic cables. Commissioning and finalizing part of the project will be done February 2009.

About us:

LIOS Technology is the global leader in the development and supply of state of the art frequency domain based distributed temperature monitoring systems. The LIOS DTS product line comprises a range of real-time, multimode fiber optic based linear temperature measuring devices. LIOS offers Real Time Thermal Rating (RTTR) solutions for ampacity predictions of the power cable and overhead transmission line installation transparently integrated with its field proven DTS systems.
